An Index of Fruit Cultivars Tested or Developed on the Canadian Prairies

Campbell G. Davidson, Ph.D.

Research Scientist

Morden Research Station

Introduction

This index has been prepared as a result of many inquiries concerning the introduction of fruit cultivars. It is not an availability list. It is not a hardiness list. It is, however, a list of the major woody fruit cultivars that have been developed or tested on the Canadian prairies. It documents the major characteristics of all cultivars which have been tested, including historical information on those no longer grown. The publication provides a documentation and hard copy of a computer data file which can be used to efficiently manage and update the information.

The list was compiled from reports from major prairie institutions and nurseries, and from personal correspondence. The checklist is organized alphabetically by cultivar name for each fruit type. Categories for descriptions have been kept to a minimum to help keep the list to a manageable size. Categories and terms included are defined in Table 1. An alphabetical listing, including all fruit types, is presented. This listing is designed to assist the user to quickly find a particular cultivar name if the fruit type is not known. The major body of the manuscript includes the contents of the data base presented for each fruit type.

This data file is also available on floppy disk for people who have access to an IBM type personal computer. The base program utilized is Database III plus. Database III plus is a data management program developed and sold by Ashton-Tate. It allows searches of any field in the report or restructuring the data in a method more directly suited to immediate needs,

which significantly improves the versatility of the report. The data file is also available on an ASCII format. This file can be read by BASIC as a random access file. It can also be accessed using word processing software. Documentation is provided with the data file.

Individuals may obtain a copy of the report on disk by providing a formatted 1.2 mb or 360K floppy disk to the author at the Agriculture Canada Research Station, Box 3001, Morden, MB, ROG 1J0.

More information remains to be gathered, and updating the data file will be required. The author encourages readers to provide further information and identify errors. With the assistance of users of this information it will be possible to complete the computer listing and keep it up-to-date. Future updates may include the location of particular cultivars and quality parameters such as hardiness. Readers willing to provide such information should contact the author.

French Introduction on page 33.

Table 1. Definition of terms used in fruit descriptions

Term Definition

Record # record number

Origin parent or parentage of cultivar if known

Introduced person, institution, or nursery that introduced the cultivar

Year year introduction was made

Rel size relative size in comparison to other cultivars of the same fruit

type

Grd colour ground colour of the fruits outer covering

Overlay colour of pigmentation which overlays the ground colour

Flesh colour of flesh of the fruit

Use major indicated use; P = processed, F = Fresh

Maturity date of maturity relative to other fruits of the same type. E =

early, M = midseason, L = late

Diameter diameter of fruit based on average measurements

Skin colour of outer covering of the fruit

AP Apple

CAP Crabapple

PL Plum

CPL Cherry plum

SCH Sand cherry

SRC Sour cherry

NCH Nanking cherry

APR Apricot

PR Pear

SAS Saskatoon

INTRODUCTION

Cet index est le fruit de nombreuses enquêtes concernant l'introduction de cultivars de fruits. Ce n'est pas une liste de disponibilité, ni une liste de rusticité, mais c'est une liste des principaux cultivars de plantes fruitières ligneuses créés ou testés dans les Prairies canadiennes. Il décrit les principaux caractères de tous les cultivars testés et présente des données historiques sur ceux actuellement hors d'usage. La publication donne une documentation et un imprimé d'un fichier d'ordinateur qui peuvent servir à gérer efficacement l'information et à la mettre à jour.

La liste a été compilée à partir de rapports provenant de pépinières et d'institutions importantes des Prairies, ainsi que de la correspondance personnelle. La nomenclature est établie par nom alphabétique de cultivar pour chaque type de fruit. Les catégories de description sont réduites au minimum pour éviter d'avoir une liste trop longue. Le tableau l définit les catégories et les termes utilisés. Elle comprend une liste alphabétique de tous les types de fruits qui a pour objet d'aider l'utilisateur à trouver rapidement un nom de cultivar donné lorsqu'il ne connaît pas le type de fruit. Le corps principal du manuscrit comprend le contenu de la base de données présenté pour chaque type de fruit.

Ce fichier est également disponible sur disque souple pour ceux qui ont accès à un ordinateur personnel IBM. Le programme de base utilisé est le Database III plus. Il s'agit d'un programme de gestion des données mis au point et vendu par Ashton-Tate. Il permet de dépouiller n'importe quelle section du rapport ou de restructurer les données d'une façon plus directement adaptée aux besoins immédiats, ce qui améliore considérablement la souplesse du rapport. Le fichier est également disponible sur format ASCII. Le langage BASIC peut le lire comme fichier à accès sélectif. On peut également l'évaluer au moyen d'un logiciel de traitement de texte. De la documentation accompagne le fichier.

On peut se procurer une copie du rapport sur disque en fournissant un disque souple mis en forme de 1,2 méga-octet ou de 360 kilo-octets à l'auteur à l'adresse suivante: Station de recherches d'Agriculture Canada, B.P. 3001, Morden (Man.) ROG 1J0.

Il reste à recueillir plus de données et à mettre à jour le fichier. L'auteur incite les lecteurs à fournir d'autres données et à identifier les erreurs. Grâce à l'aide des utilisateurs de cet index, il sera possible d'établir la liste imprimée et de la tenir à jour. Les futures mises à jour pourraient inclure l'emplacement de certains cultivars et des paramètres qualitatifs comme la rusticité. Les lecteurs désireux de fournir ces renseignements sont priés de communiquer avec l'auteur.
